

## 応用

### LFI 110 Application

The LFI 110 is designed to easily snap into any RP 400 series optical power meter, offering enhanced functionality to the power meter.

The device allows technicians to identify available fibers in the F2 portion of the FTTx network without the disruption of existing subscribers. It is also a useful tone detector when used with the compatible DLS 355 dual laser source.

Measurements on the power meter are directly correlated to the actual core power with measurement repeatability of +/- 2dB. For more information, consult the [LFI 110 Operation Manual](#).

## ご注文方法

### LFI 110 Ordering Information

**Part #:** LFI 110

**Includes:** LFI 110 fiber identifier device, RP 400 series power meter, user's guide and carry case.

**ODM Inc. offers a complete line of [accessories](#) - including patch cords, adapters, and cleaning aids - for all aspects of optical testing.**
