応用

TP 210 Application

Used with ODM's RP 400 series optical power meter, the TP 210 provides loss measurements or 2kHz fiber identification.

At the splice location, the technician identifies the correct fiber by inserting the fiber directly into the power meter or by using a non-invasive fiber identifier device such as the [LFI 110 Live Fiber Identifier](#) from ODM.

Power to the unit is via a top mounted ON/OFF pushbutton. Low battery LED indication alerts the user to replace the battery. For extended use, ODM offers a factory installed AC power outlet and AC adapter.

ご注文方法

TP 210 Ordering Information

Part #: TP 210

Includes: TP 210 Transmit Probe, 850nm LED, includes battery and ST connector.

ODM Inc. offers a complete line of [accessories](#) - including patch cords, adapters, and cleaning aids - for all aspects of optical testing.
