VIS 300 Application

The VIS 300 advances field connector inspection by a unique focus system. This development virtually eliminates the need to place the users hand in the same position each time for effective focus control. To inspect the backplane connector the user simply inserts the probe into the connector adapter. To focus simply turn the entire probe ¼ to ½ turns for complete focus range. No longer is it necessary for the user to keep one hand on the focus wheel.

VIS Image Manager Software takes endface images displayed on the VIS 300 and displays them on your PC. Images can then be stored along with associated power measurements taken with ODM's RP 460. Trunk Reports and Microsoft Excel Site Loss Reports can be generated with one click of a button.
